Cuando recolectar el fruto

🌿 El **Índice de Madurez** de Uceda y Frías (1975) el más aceptado

🌿 Pero cada variedad posee diferentes ritmos de maduración y singulares pigmentaciones en su epicarpo

IM=0,0

IM=1,0

IM=2,0

IM=3,0

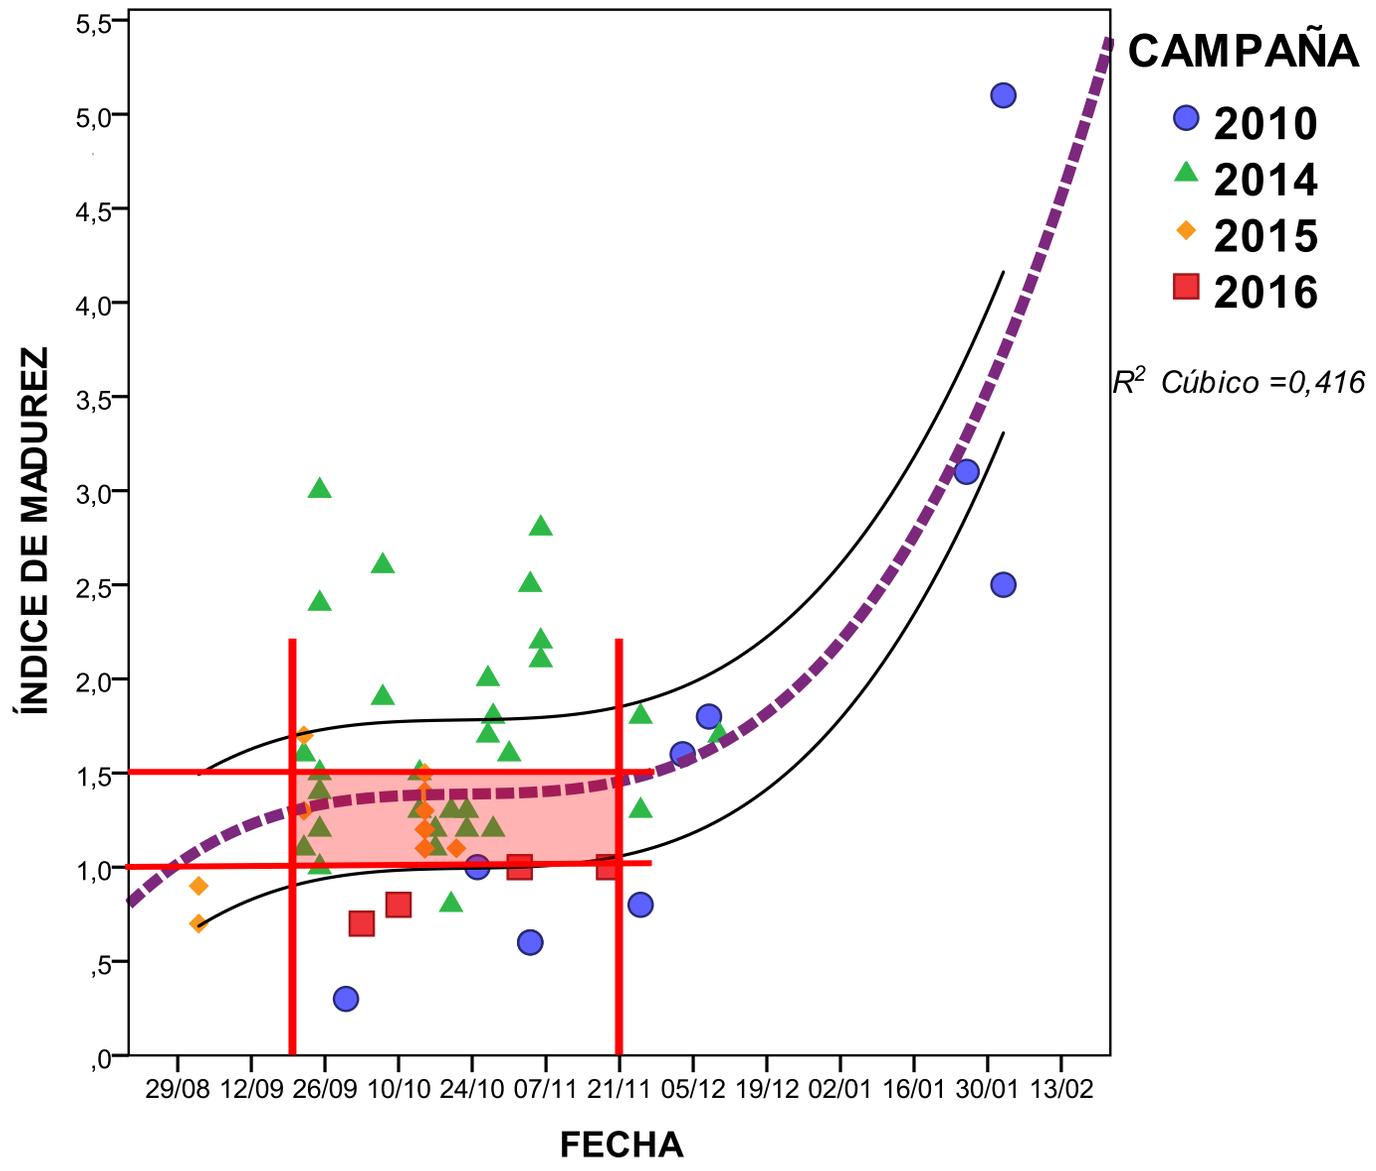

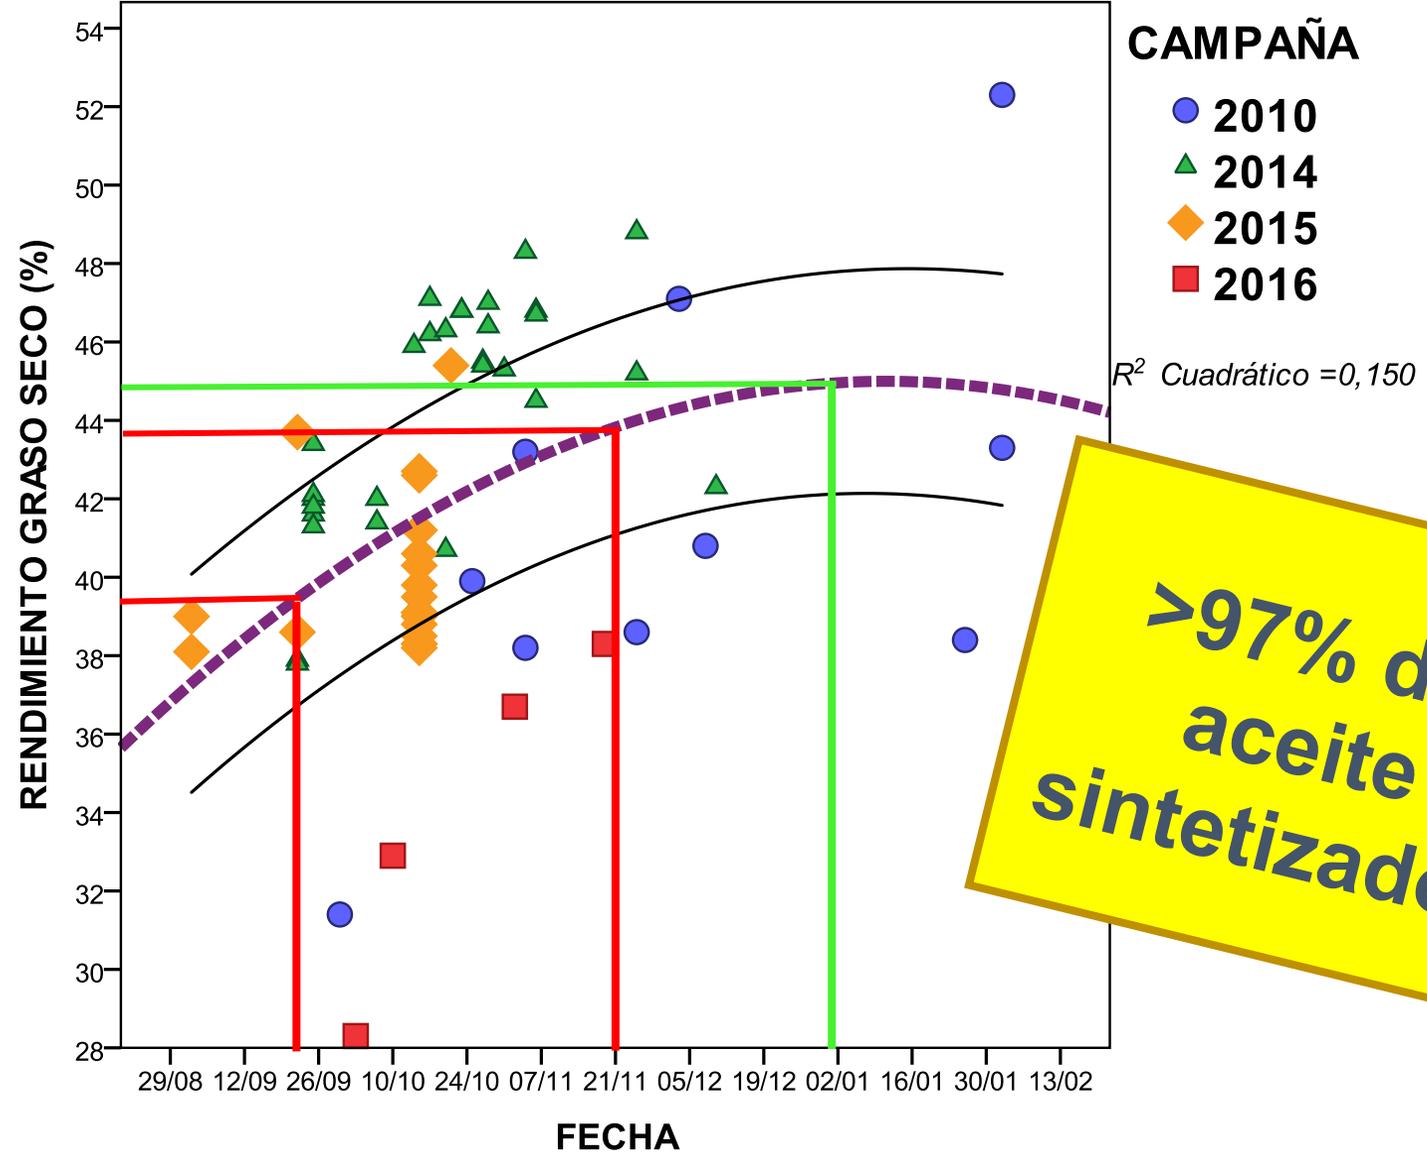

Arbequina *(datos Montaña, 2016),*

- 🕒 Variedad Tardía,
- 🕒 de maduración muy lenta,
- 🕒 Inicio de la maduración (IM=2) el 09/dic (+39 con respecto a MC),
- 🕒 De IM=2 a IM=4 en 69 días,

Maduración de Arbequina

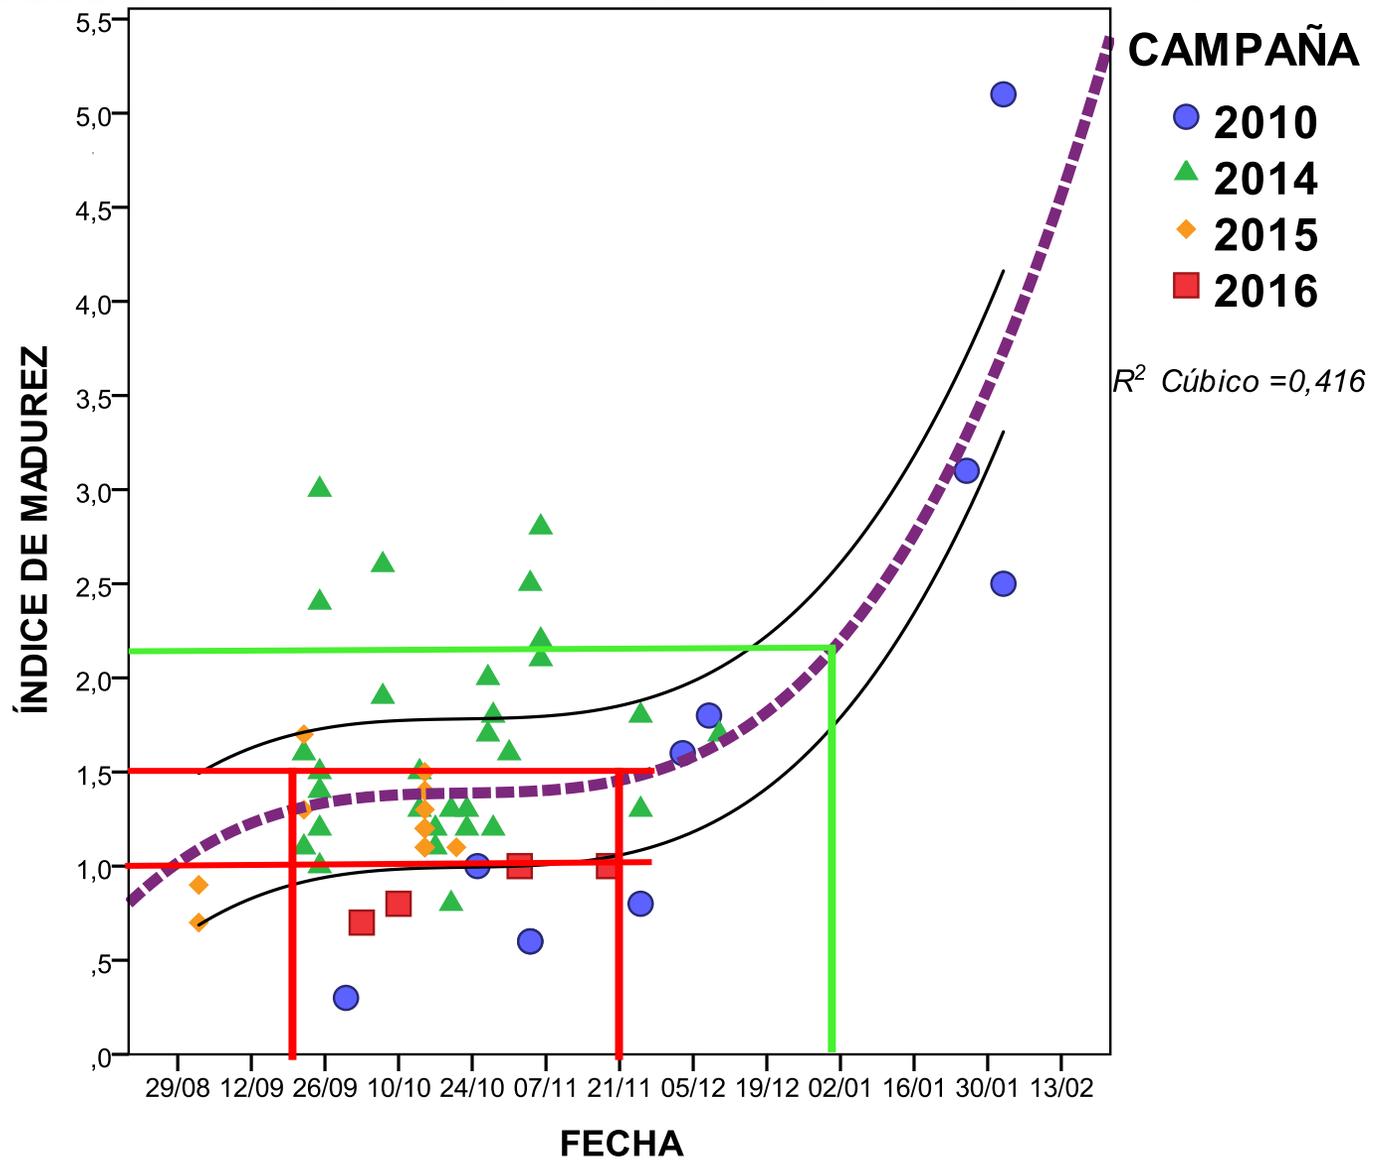

La forma correcta más adecuada es construir una gráfica con el contenido graso pero expresado en seco.

>97% del aceite sintetizado!!

Contenido Graso de la aceituna

¿qué opciones se pueden disponer para obtener más información?

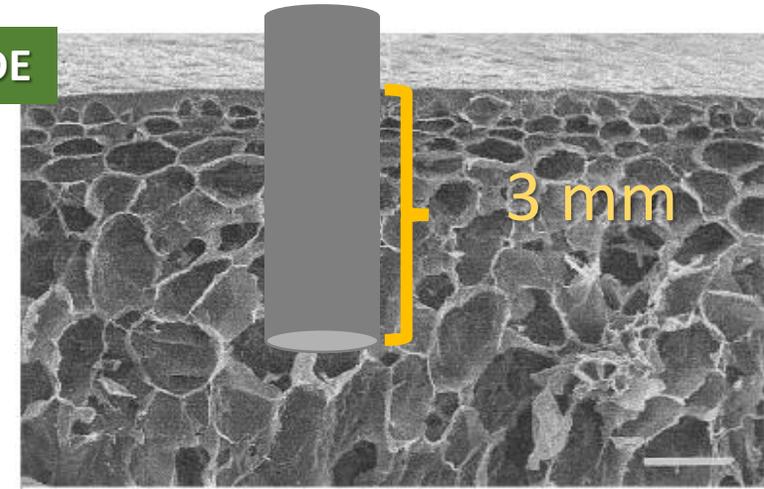

No estamos hablando de alternativas, sino como incrementar los indicadores que nos ayuden a una mejor monitorización de la maduración.

Más información, menos errores en la toma de decisiones

MADURO

R^2 Cuadrático = 0,363

Resistencia a la Penetración

- 🌳 La monitorización de las aceitunas es crucial para obtener AOVE de calidad,
- 🌳 Bajo determinadas condiciones los frutos no cambian de pigmentación pero ello no implica que otros procesos fisiológicos no prosigan acorde a la maduración,
- 🌳 Junto al RGS la cuantificación de la dureza de los frutos nos aportará información muy útil para decidir el momento óptimo de recolección,

AGR₁₂₆. MECANIZACIÓN Y TECNOLOGÍA RURAL

INTRODUCTION

There is a problem with traditional olive orchards

What we can do?

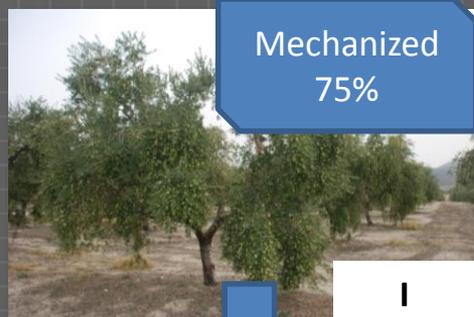

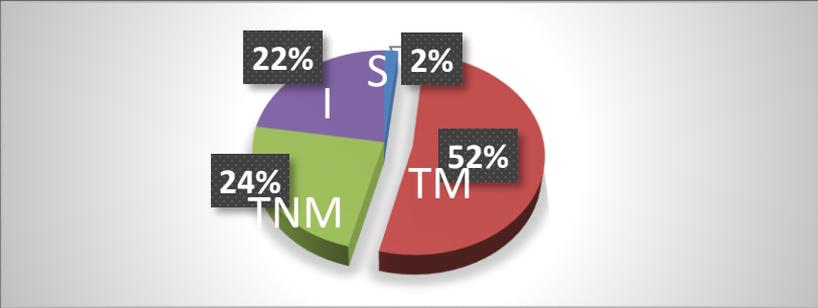

To introduce improvements by mechanization

¿Harvester?

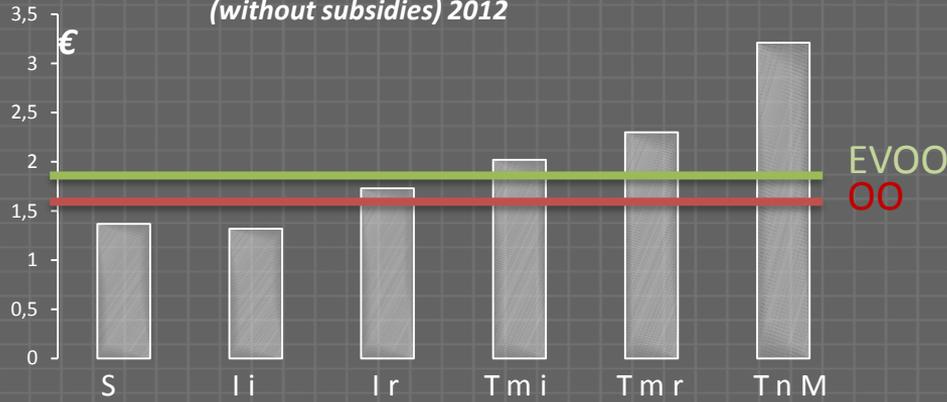

How is the situation of the olive sector?

OLIVE SECTOR

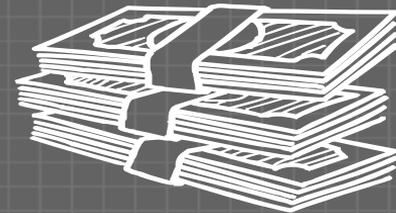

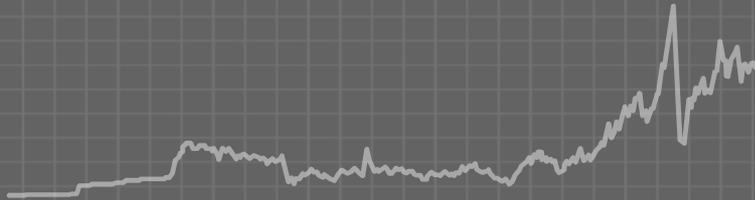

Profitability

*Olive growing cost by orchard
(without subsidies) 2012*

	Cost percentage (%)	
	TM rainfed	TM irrigated
Pest	11,9	7,9
Pruning	17,0	11,4
Fertilization	5,1	3,4
Soil	26,7	17,8
Irrigation	0,0	19,2
Harvesting	39,3	40,2

What about harvesting?

Any solution?

VlaC

XXI dC

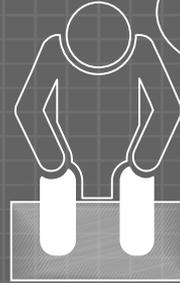

- ✓ *Vibration on bearing branches*
- ✓ *Continuos harvesting*
- ✓ *Detach and catch fruit*

- *Tree training*
- *Large spacing between trees*
- *Canopy contact*

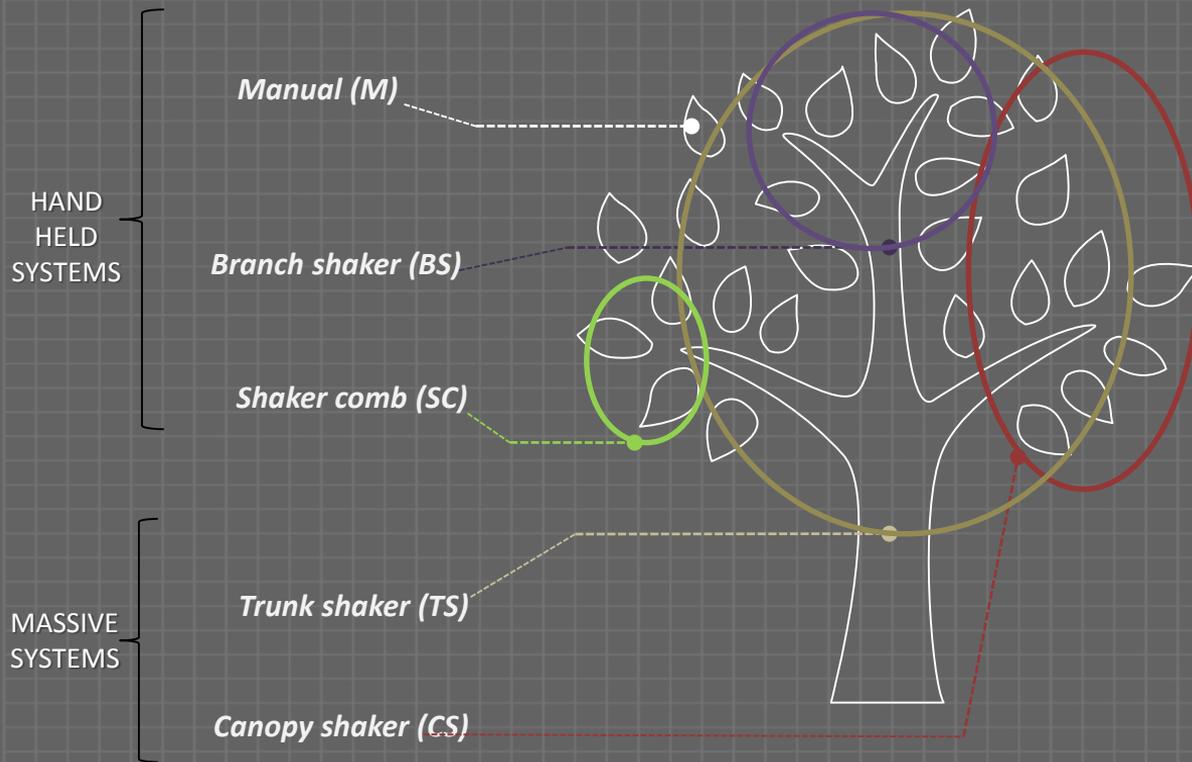

IS IT POSSIBLE THE INTEGRAL HARVESTING OF TRADITIONAL OLIVE ORCHARDS??.

TARGET

Develop a
continuous harvester for
traditional olive orchard
based on canopy shaking

1. AVAILABLE HARVESTING METHODS

2. CANOPY SHAKING BACKGROUND

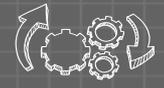

CS in other crops

CS in olive trees?

Harvest efficiency?

Harvester?

DRUM

APPROACH SYSTEM

AMPLITUDE AND FREQUENCY

SHAKER HEAD

2. CANOPY SHAKING BACKGROUND

CS in other crops

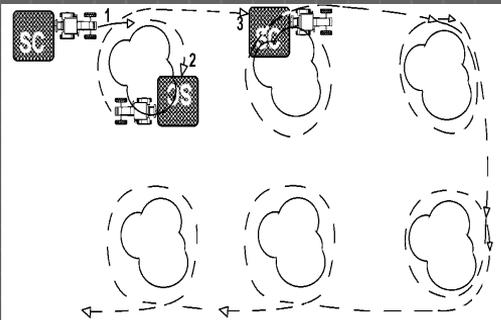

CS in olive trees?

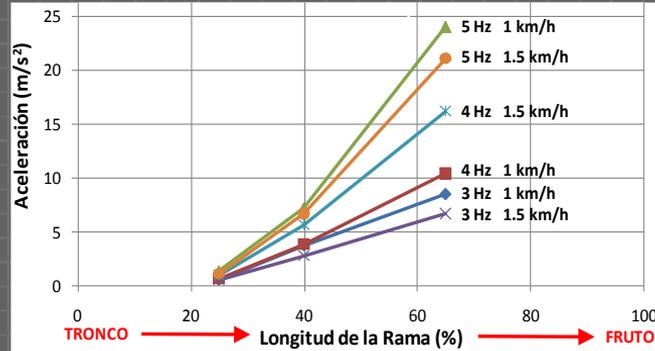

Harvest efficiency?

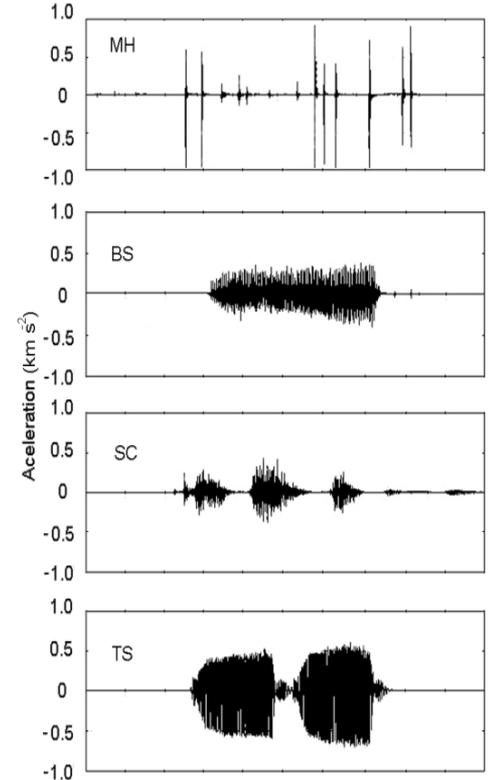

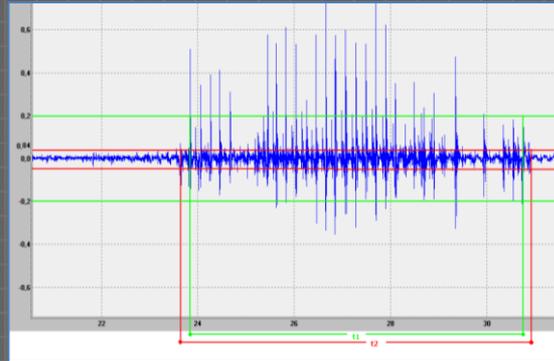

Harvester?

Field capacity: 0,2 -0,4 ha/h

- ✓ *Vibration pattern with shots of high amplitude and short duration*
- ✓ *Frequency (4-5 Hz) and ground speed (1 km/h)*
- ✓ *Low vibration transmission*
- ✓ *It is possible harvest around trees*
- ✓ *Tree training for irregular canopies*

2. CANOPY SHAKING BACKGROUND

CS in other crops

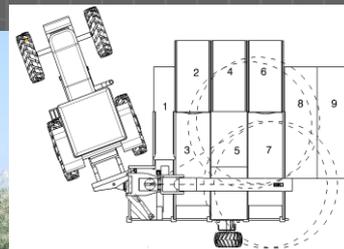

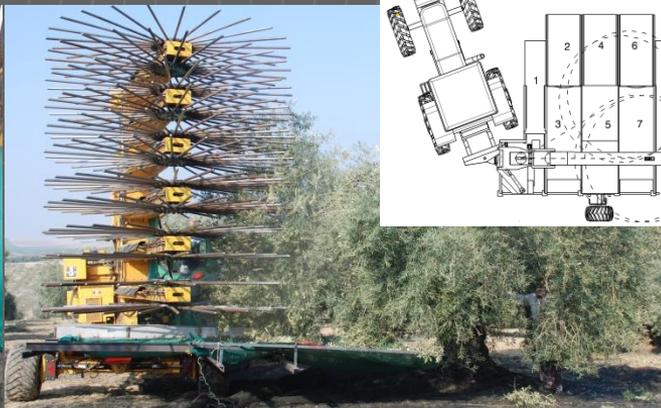

CS in olive trees?

Harvest efficiency?

Harvester?

- ✓ *Catch frame according to rod area*
- ✓ *Removal and catch efficiency acceptable*
- ✓ *Learning of the driver*
- ✓ *It is necessary a CATCH FRAME PROTOTYPE ADAPTED WITH PLATES*

TEST	Edo (%)	Ec (%)	Eh (%)
1	66,9	84,8	56,7
2	62,0	90,0	55,8

11	81,0	90,0	72,8
12	81,7	90,6	74,0
Mean+SD	75,9±6,5	87,6±2,2	66,5±6,2

2. CANOPY SHAKING BACKGROUND

CS in other crops

CS in olive trees?

Harvest efficiency?

Harvester?

PARAMETERS

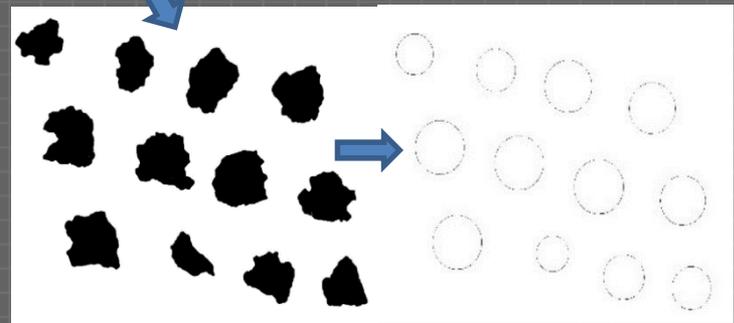

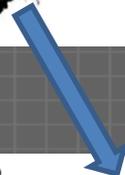

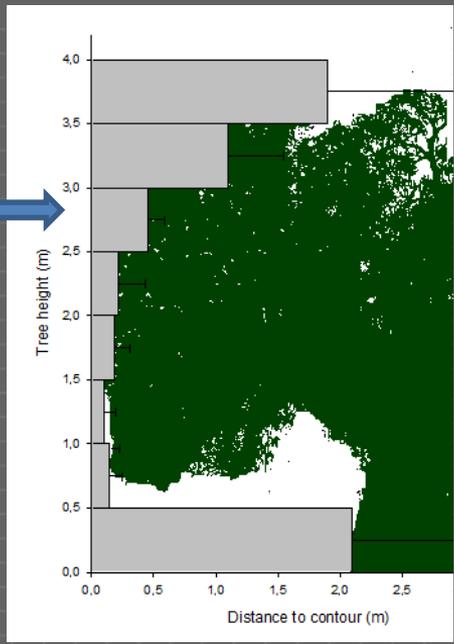

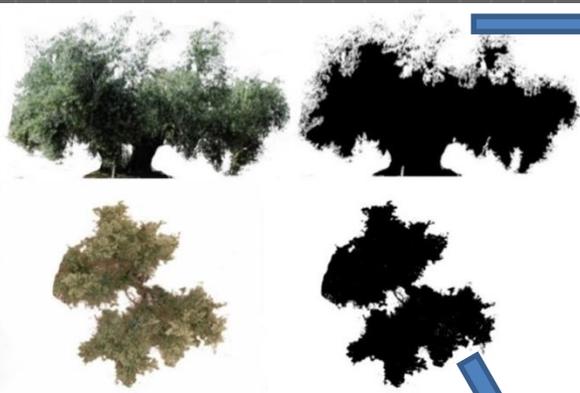

E removal (%)	92,4±3,9
E. catcj (%)	92,2±3,5
E harvest (%)	85,3±4,6
Debris (kg /kg fruit)	5,6±2,4
t (s/tree)	110

- ✓ *IT IS POSSIBLE THE INTEGRAL HARVESTING*
- ✓ *There is necessary a new harvester softer and adapted to orchard conditions*
- ✓ *There is necessary a tree training for the harvesting method*

CONCLUSIONS

*First precommercial **harvesters** have been developed introducing the **integral mechanization** in **traditional orchards** to maintain **the profitability thresholds** .*

*The **modernization process** in this traditional sector of agriculture will require a **great effort** taken into account that traditional olive growing is one of the world's oldest tree crops and is immersed in a culture that is resistant to change*

*The ongoing on a **commercial harvester** require a longer-term for tree training, machine improvements and cost optimization with a **close collaboration** between researchers, farmers and manufacturers.*

Line 1

Canopy shaker harvesters

Line 2

Trunk shaker harvesters

Line 3

Automatization and pad system for trunk shakers

Line 4

Airblast sprayer

Line 5

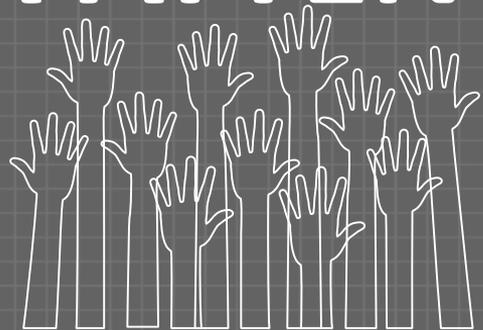

Tractor mower and automated sprayer
